From Intelligent Land Use to Sustainable Municipalities

Impuls4Action

Pilot case 3 - Pëatland, Tarasp Lai Nair, Switzerland

THIS PROJECT IS
CO-FINANCED
(ARPAF FUND) BY THE
EUROPEAN UNION

Pilot case 1 - Water management, Lower Austria

In three thematic pilot cases:

1. Water management in Alpine soils;
2. Inner Development;
3. Protecting Peatlands.

we will collect data for **toolbox**, which is the part of the Platform of Knowledge.

We created a survey to gain all information regarding the tools that different stakeholders utilize in their day to day topics 1.-2.-3.

The survey and all the data, collected from workshops and research from pilot cases are the basis for the realization of the toolbox, which serves as an educational platform.

We have created a tailor-made platform for a custom region, language and for each specific problem.

Toolbox offers different a variety of content e.g. video content, articles, links, good practices etc. It will be helpful to any user of this profession for problem solving.

The comprehensive approach to the sustainable soil protection is based on the dialogue between stakeholders, target groups and policy makers on local and regional level, thus unifying interests and improving mutual understanding.

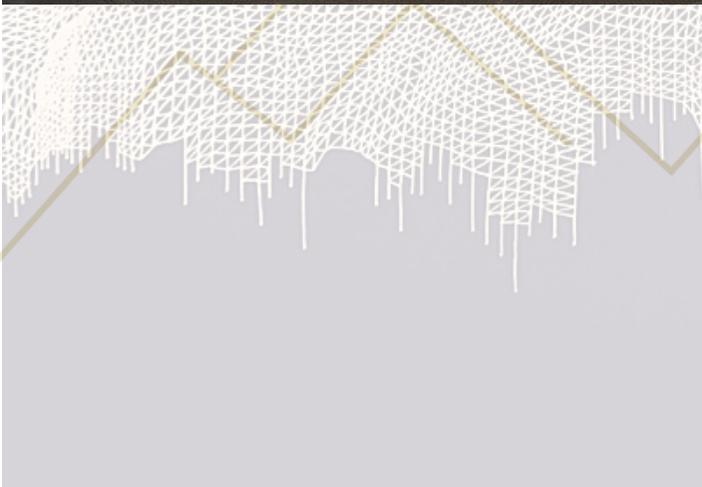

Considering this approach paired with the toolbox will in turn improve soil, water, peatland protection and positively affect green infrastructure.

Which leads to the sustainable changes that will curve the global warming and protect the nature.

Pilot case 2 - Inner development, Glurns, South Tyrol, Italy

Pilot case 1 - Water management, Pohorje, Maribor, Slovenia

Impuls4Action aims to trigger actions to support sustainable development on all levels by providing **appropriate tools**, raising awareness and finding new models for sustainable soil protection in the Alps.

Climate change increases the need for integrative activities and **tailor-made instruments** concerning the soil, peatland protection and Green Infrastructure development.
